

stamp-out
infection...

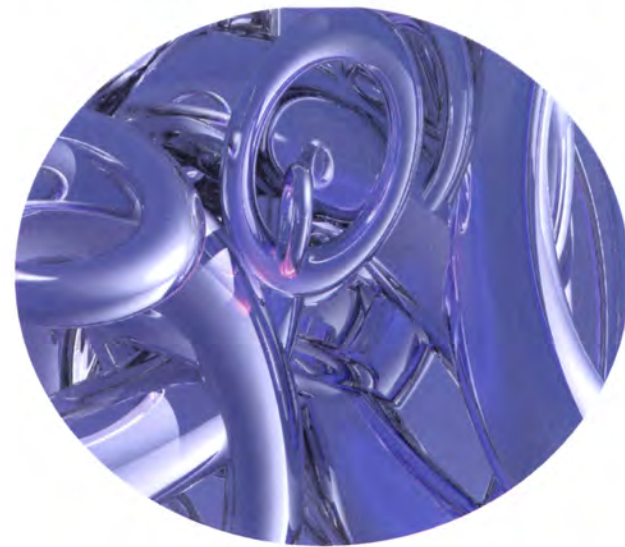

Klenz® your footwear.

After 8 minutes in a Klenz® machine footwear is completely sanitized. 'Klenz' your shoes today & have the peace of mind that your feet are not being re-infected as soon as you put your shoes back on.

Footwear is a breeding ground for micro-organisms, e.g. Athletes Foot spores. These are a major cause of foot infections.

Klenz® uses advanced **Nano Silver Technology** & Ozone to eradicate bacteria, fungi & other problem microbes. Once 'Klenzed', the chance of infection from footwear is minimised.

A 40°C wash will not kill these spores. Even if your feet are treated you could be instantly re-infected.

Silver has an incredibly strong sterilising effect. Nano particles (75,000x smaller than human hair) are absorbed by microbial cells causing them to suffocate.

Klenz® uses no heat/liquid - no damage to shoes. Silver is non-toxic, non-allergenic & therefore not harmful to humans, animals or the environment.

It also has the added bonus of reducing odour by killing bacteria - the cause of nasty smells, AND slowing the deterioration of footwear by getting rid of mould & mildew in and on shoes.
