

Micro-organisms inside footwear are a major cause of foot infection & odour...

stamp-out
infection

Klenz® your footwear.

Klenz's **NANO SILVER & OZONE** technology is the most effective way to eradicate micro-organisms inside your shoes.

**Minimise the risk of infection
& reduce odour.**

Ask your chiropodist or podiatrist to
Klenz® your footwear.

Even if you successfully treat your feet for an infection, you could re-infect yourself as soon as you put your shoes back on.

Klenz® uses a combination of **NANO SILVER** and **OZONE**, both incredibly strong sterilising agents, to eradicate bacteria, fungi and other problem micro-organisms inside your shoes. Klenz® uses NO heat or liquid - your shoes will not be damaged. To sanitize your shoes takes **only 8 minutes**.

Athletes Foot affects 1 in 7 adults. Footwear is the perfect environment for the fungal spores that cause the infection. Even a 40°C wash will not kill them, yet Klenz® will eradicate them. Unlike treatments such as sprays, Klenz® sanitizes every last square millimeter of your shoes - meaning the **chance of infection is minimised**

Klenz® has the added bonus of;

reducing odour

by killing bacteria - the cause of nasty smells.

AND

slowing the deterioration of footwear

by eliminating mould & mildew.

keep your feet
healthy...

Klenz® your footwear

Silver is non-toxic, non-allergenic & therefore **not harmful** to humans, animals or the environment!
